SUMMARY

Golang Backend Developer with 3+ years of commercial backend experience, focused on fintech systems, data consistency, and reliable service integrations. Experienced in Go, PostgreSQL, Kafka, gRPC, microservices, event-driven processing, and production support. Worked on business-critical workflows involving idempotent processing, failure handling, observability, complex domain logic, and ownership from design to production.

SKILLS SUMMARY

- **Languages:** Go, PHP, Python, SQL
- **Backend:** Microservices, gRPC, REST, API design, background workers
- **Data and Messaging:** PostgreSQL, ClickHouse, MySQL, Kafka, database migrations, query optimization
- **Reliability:** Transactional outbox, idempotent processing, retries, monitoring, alerting, incident analysis
- **Infrastructure:** Docker, Kubernetes, CI/CD, Linux
- **Engineering Practices:** System design, DDD, code review, integration testing, production support

EDUCATION

- **ITMO University** Saint-Petersburg, Russia
Bachelor's degree in Applied Mathematics and Computer Science Sep 2020 - Jun 2024

EXPERIENCE

- **Fintech / Banking Company** Saint-Petersburg, Russia
Golang Backend Developer Nov 2024 - Present
 - **Credit Portfolio and Risk Systems:** Design and develop Go backend services for credit portfolio management, risk-related workflows, and regulatory processes where data correctness and process ordering are critical.
 - **Kafka and gRPC Integrations:** Implement service-to-service integrations using Kafka, gRPC, and PostgreSQL, including event consumers, producers, API contracts, persistence logic, and failure handling.
 - **Reliable Event Processing:** Built idempotent processing flows with status tracking, batching, retries, and error handling for business-critical long-running operations.
 - **Day-Close Process Reliability:** Contributed to synchronization logic for day-close processing, reducing the risk of inconsistent portfolio-related data between internal and downstream systems.
 - **Portfolio Rule Model:** Reworked complex portfolio rule handling into a clearer domain model, improving readability, reviewability, and safety of future business changes.
 - **Engineering Practices:** Participate in architecture discussions, database design, SQL optimization, integration testing, code reviews, monitoring, and production incident analysis.
- **ITMO University** Saint-Petersburg, Russia
Teaching Assistant Sep 2024 - Present
 - **Software Design Course:** Mentor students on DDD, domain modeling, use cases, bounded contexts, event-driven design, architecture decomposition, and maintainable backend implementation.
 - **Highload Systems Course:** Mentor students on practical backend performance cases covering load testing, backpressure, rate limiting, retries, timeouts, async processing, thread pools, and troubleshooting.
 - **Code and Design Review:** Review assignments and provide feedback on architecture decisions, code quality, concurrency issues, metrics analysis, and implementation correctness.
- **VK, MyTracker** Saint-Petersburg, Russia
Junior Backend Developer March 2022 - Sep 2024
 - **Internal Backend Tools:** Developed internal backend tools using PHP, Symfony, and Go for monitoring, reporting, task tracking, and operational workflows.
 - **Automation and Integrations:** Built Jira integrations and a Go-based VK Teams bot to improve duty management, incident handovers, and engineering communication.
 - **Data Processing and Production Support:** Supported data pipeline processing handling up to 1TB of data per hour, participated in Kubernetes migration, and resolved production incidents.
